Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/773,156

Applicant(s)

BRULS ET AL.

Examiner

Allen Wong

Art Unit

2613

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☒ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Yonemitsu (5,485,279).

Regarding claims 1 and 6, Yonemitsu discloses a method and video encoder for encoding images in a first resolution mode with reference to a reference image having said first resolution (fig.20 is a video encoder that encodes images in MPEG standard including I, P and B images with a first resolution, where I and P frames are reference images), the encoder comprising a memory having the capacity for storing said reference image with said first resolution (fig.20, element 63 is a memory for storing reference image in first resolution mode), characterized in that the video encoder comprises control means for selectably encoding said images in a second, lower resolution mode with reference to two reference images having said second resolution (fig.20, element 54 controls the image prediction encoding mode), and for storing said two reference images with the second resolution in said memory (fig.20,

Art Unit: 2613

element 121 is a memory for storing reference images in second resolution mode).

Regarding claims 2 and 7, Yonemitsu discloses further including a motion estimation circuit applying a predetermined search strategy in the first resolution mode to search motion vectors representing motion between an input image and the reference image, said motion estimation circuit being arranged to apply said search strategy in the second resolution mode to both reference images (fig.20, element 64 is the motion estimation/compensation circuit that applies a search strategy in the first resolution mode and also note there is an arrow that directs the motion estimation circuit to apply the search strategy in the second resolution mode to elements 123 and then to element 122).

Regarding claims 3 and 8, Yonemitsu discloses wherein selected images are encoded in the second resolution mode with respect to one of said reference images, the motion estimation circuit being arranged to apply the search strategy in a first pass to search motion vectors with a first precision (fig.20, element 64 is the motion estimation/compensation circuit that applies a search strategy in the first resolution mode and also note there is an arrow that directs the motion estimation circuit to apply the search strategy in the second resolution mode to elements 123 and then to element 122 for searching motion vectors with a first precision), and to apply said search strategy in a second pass to refine the precision of the motion vectors found in the first pass (fig.20, note output of element 122 goes back to the DCT 164 for a second pass to refine the precision of the motion vectors found in the first pass).

Regarding claims 4 and 9, Yonemitsu discloses further arranged to selectably encode images in a third, yet lower resolution mode with reference to two reference images having said third resolution, said motion estimation circuit being arranged to apply said search strategy in the third resolution mode to both reference images, and to apply the search strategy for each reference image in a first pass to search motion vectors with a first precision (fig.20, element 202 is the motion estimation/compensation circuit that applies the search strategy in the third resolution mode to the reference images and also note there is an arrow that directs the motion estimation circuit to apply the search strategy in the third resolution mode to elements 204 and then to element 202 for searching motion vectors with a first precision), and to apply said search strategy in a second pass to refine the precision of the motion vectors found in the first pass (fig.20, note output of element 202 goes back to the DCT 203 for a second pass to refine the precision of the motion vectors found in the first pass).

Regarding claims 5 and 10, Yonemitsu discloses wherein said reference image having the first resolution is a previous image of a sequence of images (fig.20, note the reference image of a sequence of images stored in element 63 is in the first resolution), one of the reference images having the second resolution is a previous image of said sequence, and the other one of the reference images having the second resolution is a subsequent image of said sequence (fig.20, note the reference images of a sequence of images stored in element 124 is in the second resolution).

Art Unit: 2613

Regarding claims 11 and 12, Yonemitsu discloses a method and video decoder for decoding images in a first resolution mode with reference to a reference image having said first resolution (fig.21 performs the decoding operation of fig.20; also, fig.21 is a video decoder that decodes images in MPEG standard including I, P and B images with a first resolution, where I and P frames are reference images), the decoder comprising a memory having the capacity for storing said reference image with said first resolution (fig.21, element 75 is a memory for storing reference image in first resolution mode), characterized in that the video decoder comprises control means for decoding said images in a second, lower resolution mode with reference to two reference images having said second resolution (fig.21, note the IVLC 141 decodes prediction mode, motion vector, and quantization scale information, coded from control means of fig.20, for decoding the reference images in the second, lower resolution mode), and for storing said two reference images with the second resolution in said memory (fig.21, element 85 stores reference images in the second resolution).

Contact Information

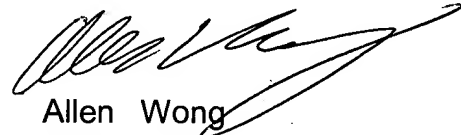

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allen Wong whose telephone number is (703) 306-5978. The examiner can normally be reached on Mondays to Thursdays from 8am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Kelley can be reached on (703) 305-4856.

Art Unit: 2613

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
